IBERIA TO IMPLEMENT TRANSPOCO COMPLETE FLEET MANAGEMENT SOLUTION THROUGHOUT SPAIN

[Inter Airport 2019 - Stand 2263, Hall C6] Leading telematics and fleet management software provider, Transpoco, has announced that it has enabled Iberia to achieve significant operational savings by implementing its advanced fleet management solution on its ground support equipment in numerous airports across the airline's Spanish network.

Following a rigorous tender process, Transpoco was selected for a proof of concept in Madrid and Barcelona on up to 200 motorised assets. As a result of proven savings and return on investment Iberia will roll out the technology on up to 1400 motorised assets across further stations throughout Spain.

The Transpoco solution will help Iberia Airport Services to manage its fleet more efficiently and reduce any misuse from daily operations.

Iberia will benefit from Transpoco's product functionality that includes tracking and controlling motorised equipment at the various airport ramps. The system also has the potential to integrate with many other platforms within the organisation including sharing data with airport authorities to update them with live location of the Iberia fleet.

Ángel Marcos, Iberia Chief Airport Services Officer, commented, "At Iberia we are constantly striving to find new ways of innovation, maximising efficiency and providing a punctual, safe and reliable service to our customers. By integrating the Transpoco fleet management software across multiple stations in Spain we have helped to achieve this". Ángel Marcos added, "The solution from Transpoco allows us to increase safety and performance on the ramp, being more environmentally friendly while reducing operational costs. The Transpoco system and team have been very flexible and agile in reaching the business specifications of our requirements".

Andrew Fleury, Transpoco CEO, commented, "We are delighted to be working with a world class airline in Iberia as we have been developing our system for many years with clients now in over 60 different countries. Our specialism in the aviation industry has been recognised internationally by some of the largest companies in the world and we continue to make internal investment to expand our international client base".

ENDS

About Iberia Airport Services

Iberia Airport Services roster of more than 170 airline clients at 29 airports in Spain. In 2018 the handling unit attended some 350.000 aircraft and more than 96 million passengers.

Iberia Airport Services is distinguished by its versatility in serving all types of airlines in all types of operations, and its human and material capacity for resolving every kind of contingency.

Some 40% of Iberia's handing unit's ground vehicles are now 100% electric and thus emissions-free, and the substitution of older vehicles continues. The unit is certified by Spain's AENOR standards bureau for its quality assurance and environmental protection systems, under ISO 9,001 and ISO 14,001 standards.
